

ACRI-ST is an independent SME founded in 1999. A supplier of institutions, public and commercial space agencies dedicated to Earth Observation which brings together scientific research, engineering of complex environmental systems and monitoring.

ACRI-ST specializes in the Spatial Sciences, Environment and ICT/Big Data. The company plays a role in the whole chain: from measurement specifications to the production of relevant information for scientists, policy-makers and economic stakeholders through applications, platforms and services. ACRI-ST also has recognised skills in the field of ground stations for the processing of digital data for geophysics.

ACRI-ST is leading the design, development and operation of the Coastal TEP (C-TEP). After number of iterations with users and data providers, C-TEP is today an operational system that is eligible as NOR Platform Tier service provider.
