

**BROCKMANN
CONSULT**

Brockmann Consult GmbH develops software and services for the exploitation of environmental data with a clear focus on optical Earth Observation since 2002. The mission of the company is to support researchers, businesses, decision makers, and the general public in untapping the full benefits of the vast amounts of data available today. To this end, the company is developing and maintaining successful open source software products like SNAP, the ESA CCI toolbox cate, or the data cube software xcube and providing information services, e.g. for Copernicus and public authorities. Recently, Brockmann Consult's portfolio has been complemented by cloud-based services like Euro Data Cube, Earth System Data Lab, and Agriculture Virtual Laboratory, which allow users to access, analyse, process, and visualise analysis-ready data of the environment at low costs and without expert knowledge.
